Kalpasthāna, adhyāya 4

Introduction

The fourth chapter of the Kalpasthāna of the *Suśrutasaṃhitā* addresses the topic of snake bites and snake venom. Unusually for the Nepalese version of the *Suśrutasaṃhitā*, the discussion is framed as a question from Suśruta to the wise Dhanvantari. Suśruta's questions are about the number of snakes, how they are classified, the symptoms of their bites and the pulses or stages of poisoning experienced by a victim of snakebite and related topics. The taxonomy of snakes is presented in a presentational variant form in Figure 2.

Literature

A brief survey of this chapter's contents and a detailed assessment of the existing research on it to 2002 was provided by Meulenbeld.²⁴⁷

A discussion of this chapter specifically in the light of the Nepalese manuscripts was published by Harimoto.²⁴⁸ After a close comparative reading of lists of poisonous snakes, Harimoto concluded that, "the Nepalese version is internally consistent while the [vulgate] editions are not." Harimoto showed how the vulgate editions had been adjusted textually to smooth over inconsistencies, and gave insights into these editorial processes.²⁴⁹

Translation

- 1 Now we shall explain the procedure about the knowlege concerning the venom in those who have been bitten by snakes.
- 3 Suśruta, grasping his feet, questions the wise Dhanvantari, who was expert in all the sciences.
- 4 My Lord, you are capable of speaking about the number of snakes, and their divisions, the signs of a bite, and the knowledge concerning the pulses (*vega*) of poison.²⁵⁰

kalpa?

²⁴⁷ HIML: IA, 292–294.

²⁴⁸ Harimoto 2011: 101–104.

²⁴⁹ The two editions that Harimoto noted, Su 1938 and Su 1889, present identical texts.

²⁵⁰ The word "pulse" translates वेग, which in other contexts may mean "(natural) urge."

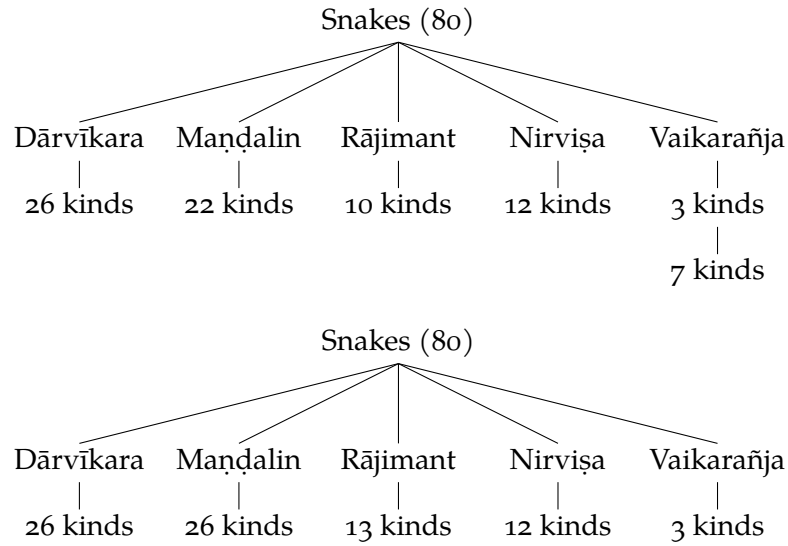

Figure 2: Top: the taxonomy of snakes in 5.4.9–13ab (Su 1938: 571).
Bottom: the taxonomy of snakes in the Nepalese version.

- 5 On hearing his query, that special physician spoke.
 “The snakes Vāsukī, Takṣaka and the rest are uncountable, O great one.
 6–9ab They are snake-lords who support the earth, as bright as the ritual fire,
 ceaselessly roaring, raining and burning. They hold up the earth, with
 its oceans, mountains and continents. If they are angered, they can des-
 troy the whole world with a breath or a look. Honour to them. They
 have no role here in medicine.
 The ones that I shall enumerate in sequence are those mundane ones
 with poison in their fangs who bite humans.²⁵¹
 9cd–10 There are eighty kinds of snakes and they are divided in five ways: Dar-
 vīkaras, Maṇḍalins, Rājimants, and Nirviṣās. And Karañjas that are
 traditionally of three kinds.²⁵²

respect.

Here, it is rather the discrete stages or phases of physiological reaction to envenoma-
 tion.

²⁵¹ The next few verses are discussed in detail by Harimoto (2011: 101–104), who shows
 that in the taxonomy of snakes, the Nepalese version of the *Suśrutasamhitā* has greater
 internal coherence than the vulgate recension.

²⁵² Harimoto (2011) translates these names as “hooded,” “spotted,” “striped,” “harm-
 less,” and “hybrid.”

- 11 Twenty hooded snakes are known, six Maņḍalins, and the same number of Rājimants. Niriviṣas and Karañjas are
