Uttaratantra, adhyāya 38

Introductory remarks

31 Only **Summary of the Content** The chapter talks about various diseases of the female reproductive system and, in doing so, combines both aspects that go into a representation of diseases in āyurvedic literature: signs, symptoms and pathogenesis (*nidāna*), on the one hand, and medical treatment (cikitsā), on the other. In chapters of the Uttaratantra, these two aspects are sometime dealt with in two different chapters X-vijñānīya and X-pratiṣedha. There are, however, many examples where this distinction is not made.

Placement of the Chapter While in Su 1938 the current chapter is found at the end of the section on paediatrics (Kumāratantra, or Kumārabhṛtya as this section is styled in MS Kathmandu KL 699), in the Nepalese version, this is chapter 6.58, and it is chapter 23 of an entirely different section, namely, the *Kāyācikitsā*.

Several things are noteworthy in this regard:

• In the placement of the yulgate, this chapter follows upon 6.37 Grahotpatti (6.35 in the Nepalese version), a chapter that talks about the origination of nine demons (graha) that are responsible for all children's diseases described in previous chapters of the Kumāratantra. In this way, the current chapter retains the general focus on the child bearing (kaumārabhṛtya), but, at the same time, marks a change to a distinct, less mystical approach to the topic at hand (that could originate in a cultural milieu different from that of the preceding 11 chapters). Dalhana (Su 1938: 668b) explains how the chapter fits its context in the following way: Mair of 18

It is appropriate that for the sake of treating the disorders of the female reproductive system (yonivyāpat), the chapter called Countermeasures Against Disorders of the Female Reproductive System (yonivyāpatpratiṣedha) (SS.6.38) is taught immediately after the chapter called Origination of Planetary Deities (grahotpatti) (SS.6.37). It is because (1) there is an explicit mention of the word "yoni" in the statement "born in the womb (yoni) of animal and human" (in SS.6.37.13bc) and because (2) the disorders of the female reproductive system (*yonivyāpat*) are the causes for the inborn disorders of children. ¹⁶⁰

- In the placement of the Nepalese version, *Yonivyāpatpratiṣedha* is preceded by 6.56 *Mūtrāghātapratiṣedha* (6.58 in Su1938) and 6.57 *Mūtrakṛcchrapratiṣedha* (6.59 in Su1938), two chapters dealing with the diseases of the urinary tract. The current chapter carries on with the topic of diseases that affect genitalia. In its Nepalese version, the chapter opens with two verses that explain the reasons for treating the particular set of diseases. These lack any reference to the inborn disorders of children (*kumārajanmavikāra*) mentioned by Dalhaṇa, and instead highlight the importance of curing female diseases for the satisfaction of male partner.
- SS.1.3 in both Su 1938 and the Nepalese version lists the chapter at the place, where it is found in the vulgate (Cf. Sū.3.37ab: naigameṣacikitsā ca grahotpattiḥ sayonijāḥ).
- Parallel chapters in the *Aṣṭāṅgasaṇigraha* and the *Aṣṭāṅgahṛdayasaṇihitā* form a part of the *Śalyatantra* section of each text.

Parallels The current chapter is parallel in its content to *Aṣṭāṅga-saṇgraha* 6.38 and 6.39 as well as *Aṣṭāṅgahṛdayasaṇhitā* 6.33 and 6.34 (*Guhyarogavijñāna* and *Guhyarogapratiṣedha* respectively).

A close literary parallel to the first part of the chapter is found in *Mādhavanidāna* (MN) 62, or at least its version printed in @@. The readings of the MN as it stands now usually side with the vulgate version rather than with the Nepalese. In addition to the basic text, there are several valuable pointers made in the *Madhukośa*, an early commentary on the MN. This part of the text is authored by Śrīkaṇṭhadatta, who was most like a direct student of Vijarakṣita. The latter wrote the first part of the *Madhukośa*, up to chapter 32, and, what is more, can be dated to the second half of the 11th – first half of the 12th centuries (Meulenbeld 1974: 22–26). Another most interesting parallel is found in Carakasaṃhitā 6(Ci).30.

¹⁶⁰ Palhaṇa on SS.6.38.1: grahotpattyadhyāyanantaraṃ 'tityagyoniṃ mānuṣaṃ ca' iti vacanena yoner nāmasaṃkīrtanāt kumārajanmavikārakāraṇatvāc ca, yonivyāpaccikitsitārthaṃ yonivyāpatpratiṣedhādhyāyārambho yujyate [...]/

Translation

1 And now I shall explain the countermeasures against disorders of the female reproductive system (*yonivyāpat*).¹⁶¹

Noni

- *3 Since for good men, a woman is the most pleasurable thing, therefore a physician should diligently attend to the diseases located in the female reproductive system (*yoni*), because he is entirely devoted to it (that is, to curing these diseases) for the sake of (people's) happiness.¹⁶²
- *4 A corrupted female reproductive system (yoni) cannot consume semen $(b\bar{\imath}ja)$, and therefore, the woman cannot take a fetus (that is, become pregnant). She gets severe prolapses $(ar\acute{s}as)$, abdominal lump (gulma) and similarly many other diseases (roga).

Philological Notes The first two verses (2 and 3) in the Nepalese version are written in a classical variety of the *upajāti* metre:

In content, they are only approximately parallel to three hemistichs in *anuṣṭubh* metre found in Su 1938. The latter verses lack the apologetic explanation concerning the reasons for this chapter being taught.

- *5 Humours (doṣa), wind ($v\bar{a}ta$), etc., corrupted due to faulty medical treatment ($mithyopac\bar{a}ra$), ¹⁶³ sexual activity, fate, and also defects (doṣa)
- 161 On this broad understanding of the term *yoni*, see Das 2003: pp. 572–5
- 162 As our translation indicates, the sentence construction does not allow an unambiguous identification of who or what is the referent of the pronoun *tad* in the compound form *tadadhāna* 'devoted to it.' Our current understanding is that *tad* refers to the 'most pleasurable thing' mentioned in pāda a. It could, however, also refer to 'them,' that is, the 'good men.'
- 163 In our translation of the compound *mithyopacāra*, we decided for the technical meaning of the term *upacāra*, that is, 'medical application' or 'treatment'. The combination *mithyā* + *upa*-√*car* is attested several times in medical literature. At least once, at CS Vi.3.38, it is given an explicit commentarial gloss (by Cakrapāṇidatta): "*mithopacaritān iti asamyak cikitsitān*". In the SS (Su 1938), it is used once in Ut.18.30, where it refers specifically to the wrong application of ? (*tarpaṇa*) and ? (*putapāka*), both of which are mentioned in the previous verse. Another use of the compound in a seemingly conforming meaning is found in a citation from Bhoja's text quoted by Gayadāsa at SS Ni.5.17: "śvitraṃ tu dvividhaṃ proktaṃ doṣajaṃ vraṇajaṃ tathā/ tatra mithyopacārād dhi vraṇasya vraṇajaṃ smṛtam // ...". In contrast to this, the parallel verse in Su 1938 = CS Ci.30.7 = MN 62.1 reads *mithyācāra* 'wrong conduct'. All commentators (Cakra-

of menstrual blood ($\bar{a}rtava$) and semen ($b\bar{\imath}ja$), produce various diseases in the female reproductive organ (yoni). These 20 diseases are taught here distinctly and one by one along with their treatment ($bhe\bar{\imath}aja$), causes (hetu) and signs (cihna).

Philological Notes The Nepalese version of the SS continues here with 3 hemistichs in classical *upajāti* metre (see the syllabic pattern above). On the other hand, Su 1938 contains two complete verses (4 hemistichs) in the *anuṣṭubh*. Three final hemistichs are found verbatim in CS Ci.30.7cd–8. It is very likely that the these verses were borrowed from the CS into SS (and not the other way around), because CS Ci.30.7cd = SS Ut.38.5ab says that the 20 kinds of diseases were already taught in the Collection of Diseases (*rogasaṃgraha*). In the context of the SS, this reference does not make any sense and is left uncommented by Dalhana. In case of the CS, however, Cakrapāṇidatta explains that this reference points back to CS Sū.19, a chapter that does, in fact, lists all the diseases dealt with in later sections of the text. 20 diseases of female reproductive system (*yoni*) as mentioned in Sū.19.3.

The above three hemistichs in *anustubh* are also repeated in MN 62.1–2ab. Given that all following verses stem from the SS, it is likely that MN 62.1–2ab too was incorporated into the text from the SS (and not its original location in the CS).

- *6.1 Because of wind (vāta), female reproductive organ (yoni) becomes:
 - 1. ? (udāvartā),
 - 2. called Infertile (vandhyā), and
 - 3. Sprung (plutā),
 - 4. Flooded (pariplutā), and
 - 5. Windy (vātalā).
- *6.2 And because of choler (*pitta*), occur:
 - 1. With bloodloss (raktakṣayā),
 - 2. Vomiting (*vāminī*), and
 - 3. Causing a Fall (*sraṃsanī*),

pāṇidatta on the CS, Śrīkaṇṭhadatta on the MN, and Dalhaṇa on the SS) explain that the wrong conduct stands here specifically for unwholesome diet. The parallel in AH Ut.33.28 = AS Ut.38.34 plainly reads *dustabhojana* 'corrupted food' instead.

- Child-murderess (putraghnī), and also
- Bilious / Choleric (pittalā).
- And because of phlegm (*kapha*) occur:
 - 1. Extremely Excited (atyānandā),
 - 2. Protuberant (*karninī*), and
 - 3. & 4. two (*caranī*), and
 - other Phlegmatic (*śleṣmalā*).
- Studyonli And similarly there are other (kinds of morbid female reproductivem) involving all doses: tem) involving all *doṣas*:
 - Impotent (*śandhī*),
 - 2. With testicles (andīnī),
 - 3. two Huge (mahatī),
 - 4. With a needle-like opening (sūcīvaktrā),
 - (sarvātmikā).

Philological Notes Verses 5 and 6 consist of four hemistichs written in a kind of tristubh metre — that is, of eight unequal pādas containing 11 syllables each — and correspond to six hemistichs in anuṣṭubh in Su 1938 (Ut.38.6cd–9cd). By the standards of classical Sanskrit prosody, the metre in all four hemistichs is irregular. However, considering the wide range of metrical variations of the *tristubh* permissible in Epic Sanskrit, the concerned verses can be considered to fall well within metrical norm. Based on the metrical analysis of a large sample of tristubh passages in the Mahābhārata, Fitzgerald (2009: 108) postulated the following general metrical structure:

 Table 2: Summary of table 3 in Fitzgerald 2009.

Our verses scan:

Table 3: Metrical structure of vss. Ut.38.5–6 in the Nepalese version of the Suśrutasamhitā.

Following Fitzgerald's hypothesis (Fitzgerald 2009: 99) formulated explicitly with regard to the *Mahābhārata* that "the more variable a *triṣṭubh* passage of the Mbh is, the older it is likely to be", one may speculate that the current passage in the Nepalese version may go back to an ancient textual layer that, at the time when the hyparchetype of the Nepalese version was produced, was not yet fully "Sanskritized" and harmonized with the surrounding passages. Alternatively and, perhaps, less likely, vss. 5–6 of the Nepalese version could have been composed as an attempt to harmonize the text of the SS — that is, to recast the list of diseases originally written in *anustubh* into *triṣṭubh*.

Note that so far we have not come across any other examples of non-Classical metres used either in Su 1938 or in the Nepalese version.

- 9 The Retaining (*udāvartā*) releases foamy menstrual blood (*rajas*) with pain. One should diagnose the Infertile (*vandhyā*) by the absence of menstrual blood (*ārtava*), and the ? (*utplutā*) by chronic pain. In the case of Flooded (*pariplutā*), there is an extreme appetite for sex.
- The Windy ($v\bar{a}tal\bar{a}$) is hard, stiff, afflicted by stabbing and pricking pain. And in four former types too, there are painful sensations ($vedan\bar{a}$) associated with the wind (anila).
- The Bloodloss (*lohitakṣayā*) is the one that has blood that diminishes with a burning sensation. And the Vomiting ($v\bar{a}min\bar{\iota}$), flooded with menstrual blood (rajas), ejects the semen ($b\bar{\imath}ja$) in the flow. ¹⁶⁴
- The Falling ($prasramsan\bar{\imath}$) protrudes, it is agitated, and delivery is hard. The Child-Murdress ($putraghn\bar{\imath}$) kills a well-established fetus because of flows of blood (rakta). ¹⁶⁵

Philological Notes In 10ab, we introduced two minor corrections and deleted the final *anusvāras* in *prasraṃsanīṃ* and *duḥprajāyanīṃ* found in both MSS. In doing so, we effectively changed the Accusative ending to the

¹⁶⁴ The exact force of *srutau* 'in the flow' remains unclear.

follows Palhaṇa's comment: sthitaṃ sthitaṃ grabhaṃ hanti, notpannamātram, 'She kills a "sthitaṃ sthitam" fetus, not the one that has just arisen.' Note, however, that from a strict Pāṇinian point of view, this reduplication can be used to indicate either a permanent or a repeated character of an action or propererty (Cf. A 8.1.4: nityavīpsayoḥ), thus 'always established' and 'repeatedly established' respectively. The second option seems contextually fitting as well and would point towards repeated miscarriage.

Nominative ones. Apart from mere grammatical, that is, syntactic, reasons, we believe that it is possible to explain how this mistake could occur. Based on irregular forms of both <code>anusvāra</code> signs (that is, in MS Kathmandu KL 699 and MS Kathmandu NAK 5-333) at the end of <code>prasraṃsanīṃ</code>, and considering the fact that MS Kathmandu KL 699 is missing one syllable, we believe that both MSS could have faithfully copied what initially was an insertion mark of their common ancestor. The addition of an <code>anusvāra</code> after <code>duḥprajāyanī</code>, on the other hand, is most likely deliberate and occured after the initial confusion between an insertion mark and <code>anusvāra</code> in order to smooth out the syntax.

If we are correct in thinking that the omission of one syllable in 10a was already present in the common ancestor of MS Kathmandu KL 699 and MS Kathmandu NAK 5-333, the question about the source of MS Kathmandu NAK 5-333's reading <u>samsramsate</u> arises. At the moment, it remains unclear to us whether the scribe of MS Kathmandu NAK 5-333 had access to further textual sources or whether he conjectured the text on his own. Note also that this hemistich is written in an uncommon type of <u>anuṣtubh</u>, namely, a ta-vipulā. Note, furthermore, that a reding parallel to the Nepalese edition is found, for example, in Mādhavanidāna 64.6ab. Here, however, the text readds <u>sramsate ca</u>, which bring the metre back to a regular <u>anuṣtubh</u>.

- The Choleric ($pittal\bar{a}$) has intense burning sensation ($d\bar{a}ha$) and inflammation ($p\bar{a}ka$). And in the case of the first four kinds as well, one should include the symptoms of choler (pitta).
- She overindulges in sex (*grāmyadharma*) because of excessive enjoyment (*atyānanda*) and dissatisfaction. And in the case of ? (*karṇinī*), from phlegm (*śleṣman*) and menstrual blood (*āsṛk*) a protuberance (*karṇikā*) developṣ in the ? (*yoni*).
- During sexual intercourse (*maithuna*), the first? (*caranī*) is the one that

¹⁶⁶ The first four kinds are described in the preceding verses. They are (lohitakṣayā), (vāminī), (prasraṃsanī) and (putraghnī).

¹⁶⁷ The syntax of 12ab differs from its parallel formulations beginning with 8ab. The most notable irregularity is that the concerned hemistich lacks the name of the described condition and, consequently, the Nominative subject of the short sentence. It seems likely, therefore, that the Ablative atyānadāt 'because of excessive enjoyment' is meant additionally to explain the reasons behind the specific name of the disease, that is Excessive Enjoyment (atyānandā).

surpasses the man.¹⁶⁸ Because of frequent excessive intercourse, the semen $(b\bar{\imath}ja)$ then does not stay in place.¹⁶⁹

AN OTHER

Philological Notes Note here that the reading of Ut.38.16ab printed in the Su 1938 is the one given by Dalhana as an alternative. The reading that he accepted in his main text (inferable from the text his commentary) must have been identical with Ut.38.13ab of the Nepalese version: *maitunetyādi/pūrvā caranī atiricyate maithunācarane 'dhikā bhavati*

- Phlegmatic (*śleṣmalā*) female genitals (*yoni*) are slimy, formented by itchiness and very cold. And in the first four types too, one should include symptoms of phlegm (*kapha*).
- In the case of ? $(sandh\bar{\imath})$, ¹⁷⁰ the mentrual blood $(\bar{a}rtava)$ and breasts are missing, ¹⁷¹ and during sex, it is rough to the touch.
- 168 Dalhaṇa's reports two readings of the hemistich (see the Philological Notes) and, accordingly, proposes two slightly different (though equally puzzling) explanations of the clause 'to surpass the man during sexual intercourse'. In the first variant (identical with the Nepalese version), he explains that during the intercourse, the vulva? (yoni) afflicted by the condition becomes bigger, i.e., swells: pūrvā caraṇī atiricyate maithunācaraṇe' dhikā bhavati. However, it remains unclear what syntactic role is ascribed to the Ablative of the word 'man' (puruṣāt). The second explanation is similarly unclear: puruṣāt pūrvam atiricyate, atyarthaṃ kaṇḍūyata ity arthaḥ. Taken literally, it says that a woman afflicted by the particular condition is scratched excessively (or, perhaps, feels excessive itchiness). Madhukośa accepts Dalhaṇa's alternative reading as the main text of Mādhavanidāna 62.9ab. Accordingly, it assumes that the condition is called a-caraṇā and that it makes a woman in-capable of enjoying lovemaking so that she withdraws from it before the man (acaraṇā' samyanmaithunācaraṇāt pūrvaṃ prathamaṃ puruṣād atiricyate viramati).
- 169 The syntactic structure of 13cd corresponds to that of 12ab, and, by the same token, it seems likely that the Ablative 'because of frequent excessive intercourse' (aticaraṇāt) is meant to explain the name of the condition, namely, Excessive Intercourse (aticaraṇā).
- 170 It is noteworthy that both MSS equally unambiguous in transmitting <code>ṣaṇḍhī</code> as the name of the condition here, and calling it <code>śaṇḍhī</code> in the list above (see verse 8). At the moment we preserve this orthographic variation in our provisional edition and in the translation. Note, furthermore, that in our printed sourses of the verse (Su 1938 and <code>@@Mādhavanidāna@@</code>) that condition is caleld <code>ṣaṇḍī</code>.
- 171 From a strict grammatical point of view, the compound <code>naṣṭārtvastanaḥ</code> (as well as the uncompounded reading of H, <code>naṣṭārtavaḥ stanaḥ</code>) should mean 'breasts that lack menstrual blood'. At the moment, we cannot make any sense of this translation and follow the <code>Su 1938</code> (<code>anartvastanā ṣaṇḍī</code>) and the <code>Mādhavanidāna</code> (MN 62.11: <code>anartavā 'stanī ṣaṇḍī</code>) in thinking that the intention of the author was to express that both the

- And the ? (*yoni*) of a juvenile woman, taken by a copulent man, 172 may become ? ($andan\bar{\imath}$). 173
- 19 (*mahāyoniḥ*) is wide open and (*sūcīvaktrā*) is very closed. For those women who have all the symptoms,their genitals (*yoni*) have all the humours.
- And also in first four types, one observes the symptoms of all humours. These five types of incurable diseases of female genitalia (yonivyāpat) are diseases that arise from all the humours.

Philological Notes In this verse, we introduced a conjectural emendation and adopted the reading *sarvalinganidarśanam* instead of the variant *sarvalingānidarśanam* that is supported by both MSS. We have two reasons for doing so.

On the one hand, we think that the reading of the MSS is faulty. If parsed as *sarvalingāni darśanam*, we arrive at a faulty syntactic construction that we think is unlikely to occur in our text. The parsing *sarvalinga-anidarśanam* 'one does not observe the symptoms of all humours', on its turn, is possible to sustain from the point of syntax. However, it violates the repetitive structure of the section, which consists of (1) a set of verses describing specific symptoms of the four types of (*yonivyāpat*) associated with a particular humour, (2) a description of a general type of *yonivyāpat* caused by the particular humour, and (3) a statement that the general symptoms of the particular humour are observed in the case of the four specific types as well. This being the case, we expect that the current verse does exactly this.

On the other hand, our conjecture is supported by an external evidence

breasts and the mentrual blood of a woman afflicted with the particular condition are reduced. From a grammatical point of view, however, the *karmadhāraya* compound *ārtavāstanā* should be either singular neuter or dual masculine.

¹⁷² Both medieval commentators, Dalhaṇa and Śrīkaṇṭhadatta, explain that a 'copulent' is aneiphimism for a large penis. Cf. Dalhaṇa on SS.Ut.38.18: atikāyo bṛhatsādhano haraḥ and Śrīkaṇṭhadatta on MN 62.11: atikāyagṛhītāyā mahāmehanena gṛhītāyaḥ.

¹⁷³ Note that in the version of Su 1938, the condition <code>andani</code> is called <code>phalini</code>, or, according to a variant reading and its explanation offered by Dalhaṇa, <code>aphalini</code>. @@MN@@ reads <code>andali</code> and reports <code>andini</code> as the reading of the MS 'ka'. Since the term presupposed by <code>Śrīkanhadatta</code> was based on the primary nominal stem <code>anda</code> 'egg' (Cf.: <code>andalī</code> and <code>andavan nihṣtā yonih</code>), it is more likely that he read either <code>andanī</code> or <code>andinī</code>. Note, furthermore, that in Maithilī as well as in the modern Bengali script, letters <code>n</code> and <code>l</code> can be easily confused.

of Bhāvaprakāśa Ma Ci 70.16 that reads sarvalingasamutthānā sarvadoṣaprako-pajā | catasṛṣv api cādyāsu sarvalinganidarśanam ||

- But in the case of the curable ones, the sequence beginning with oleation 174 for each humour (dosa) is recommended. And one should especially administer an vaginal douche (uttarabasti) according to the instructions. 175
- One should treat a female genital (yoni) that is rough, cold, rigid and lacking in sensation (alpasparśa) with pot-sweats (kumbhīsveda) filled with marsh water.
- 23 One should also put spiced, cooked meats (veśavāra) mixed with
- 174 Commenting on this, Dalhaṇa says: "In this way one understands the following meaning: in the case of curable diseases of female genitals, one should first use the type of oleation that counters the particular humour and then apply therapeutic emesis etc." (etena yasya doṣasya yaḥ pratyanīkaḥ snehas tena snehena saṇsnehya tato vamanādīn sādhyāsv avacārayed ity arthaḥ)
- 175 SS Ci 37.100ff. give a detailed account of the therapeutic procedure called *uttarabasti*. These verses also describe specific instruments and application methods that vary depending on the gender and age of the patient. Therefore, our translation 'vaginal douche' is called by the context. In other contexts, the same term could refer instead to smth. like 'urethral douche'.
- 176 The term <code>kumbhīsveda</code> occurs several times in other āyurvedic works. Commenting on this verse, Dalhaṇa gives a detailed account of the procedure: "One should treat with <code>kumbhīsveda</code>, that is to say, one should prepare a pot filled with decoction made from wind-reducing substances such as meat of aquatic animals and those living in marshes, bury it in earth, prepare a bed above it, add to the decoction globules of iron stones? (<code>lauhapāṣāṇa</code>) melted in the fire, and treat the woman with the vapour (<code>bāṣpasveda</code>) that arises from that pot and is directed only to the region of female genitalia (<code>yoni</code>). However, others explain that one should take the heat that comes about when one adds water into the pot filled with meat of aquatic and marshy animals as well as substances reducing wind." (<code>kumbhīsvedaih</code>, ānūpaudakamāṃsavātaghnadravyakvāthapūrṇāṃ kumbhīṃ kṛtvā bhūmau nikhanya tadupāri śayyāṃ saṃsthāpyāgnisantaptalauhapāṣāṇaguḍakān kvāthe nikṣipya tadutthitair bāṣpasvedair yonipradeśamātragāmibhir upacaret; anye tu kumbhīṃ vātaharadravyānūpaudakamāṃsapūrṇāṃ sajalāṃ kṛtvā pravṛttoṣmāṇaṃ gṛhṇīyād iti vyākhyānayanti/—6.38.24ab (Su 1938: 669–670).)
- 177 As Dalhaṇa points out here, <code>veśavāra</code> is defined in SS.1.46.365–6 as follows: "Meat, boneless and steamed, is again pounded on stony slab and cooked after mixing pippalī, śuṇṭhī, marica, jaggery and ghee. This is known as vesavāra (curry). Vesavāra is heavy, unctuous, promotes strength and allays disorders of vāta." (trl. PV Sharma, vol. 1, p. 530). <code>māṃsaṃ nirasthi susvinnaṃ punar dṛṣadi peṣitam | pippalīśuṇṭhimaricaguḍasarpiḥsamanvitam || aikadhyaṃ pācayet samyag vesavāra iti smṛtaḥ | vesavāro guruḥ snigdho balyo vātarujāpahaḥ ||</code>

- sweet drugs in the vaginas (yoni). And the women should gently hold enough Country Mallow ($bal\bar{a}$) oil.
- One should also apply suitable types of lavage as well as vomiting. In diseases with burning sensations $(\bar{u}s\bar{a})$ and heat (cosa), a physician should apply cold treatment that has been taught.
- A physician should fill a vagina (*yoni*) that has a bad smell or is slimy with powders prepared from the five astringent substances (*pañcaka-ṣāya*).¹⁷⁸ And in such a case, the purifying agent is a decoction made from ingredients such as the royal tree (*rājavrkṣa*).¹⁷⁹
- As for a vagina connected with vaginal worms (*yonikrimi*), ¹⁸⁰ one should slowly fill it, along with cow urine and sea salt, with pastes composed of cleansing substances.
- And he should wash the vagina that is itchy and lacking in sensation (niḥsparśa) with the water of Indian barberries (bṛḥatī) and fill it with pastes made of them. He should also fumigate it.
- Suppositories with cleansing substances should be administered into the Protuberant (karṇinī).
 One should anoint the (prasraṃsanī) with ghee, sweat it and enter milk into it.
- 29 And then, a physician should cover it with (*veśāvara*) and make a bandage. And for each humour (*doṣa*), he should place/ prescribe SURĀRISTASAMĀM/N.

30cd He should also prescribe food reach in milk and meat broth.

¹⁷⁸ According to Dalhana, the five astringent substances (pañcakaṣāya) are (nyagrodha), (udumbara), (plakṣa), (aśvattha) and . (gardabhānḍa)

¹⁷⁹ Note that in translating this verse, we put a comma after *pūrayet*.

¹⁸⁰ The condition *yonikrimi* seems to be virtually unknown in currently preserved āyurvedic literature. The term is neither recorded in V. Jośī and N. H. Jośī (1968) or found in any of the available electronic texts. As a matter of fact, the only occurrence of the term in an āyurvedic work we are aware of, is a footnote (!) that reports an alternative reading of Cakrapāṇidatta's commentary on CS Ci.30.18 (see Y. T. Ācārya (Ca. 1941: 635b)). Outside of medical literature, the Śabdakalpadruma records a quote from the *Brahmavaivarttapurāṇa* (śrīkṛṣṇajanmakhaṇḍe 83 adhyāyaḥ). Among other things, it describes the hardships that await a śūdra, who transgresses his dharma and has sex with a Brahmin woman or with his mother. After suffering for a hundred Brahma-years in the hell, he is damned for all times to reincarnate on earth among presumably some of the lowest and most wretched beings. So, for example, he will be reborn for seven times as a vaginal worm (yonikrimi) of prostitutes (yaḥ śūdro brāhmaṇīgāmī mātṛgāmī sa pātakī | ... yonikrimiḥ puṃścalīnāṃ sa bhavet saptajanmasu ||)
